

## **Safe Set Electrostatic Disinfectant Client Check List**

*(Things you should know prior to us arriving)*

Areas intended to be disinfected must be clear of all personnel. Upon completion of our service, an additional fifteen minutes are required for disinfectant dwell and dry time.

Please turn off air conditioning or circulation prior to our application to allow the disinfectant to fully dissipate throughout your space. You can resume use immediately after spraying is complete.

Our disinfecting is a fine mist, with particulates as small as forty microns. It's designed to coat everything. We recommend turning off all unnecessary electronics, including set lights, electrical distribution, and computers within the areas being disinfected. You may also elect to place sensitive paper work or products in a safe covered area.

Our technicians are trained to be extra cautious around motion picture equipment; however, production may elect to cover high-value and sensitive electronics such as cameras, sound mixers, and computers prior to application.

Vital Oxide is food surface safe however foods such as fruits or vegetables should be removed or covered prior to spraying. Food, craft service that are in wrappers or beverages in sealed containers may be left out.

Mirrors in the make-up room or bathroom may retain a fine residue and will likely require cleaning after our application. It's also advised to remove or cover any open make up containers or items sensitive to moisture.

Should you have any further questions or concerns prior to our arrival, please don't hesitate to email or call.
